Sarajevo, BA

INVOLVEMENT

- Process engineering
- Project management
- Developer team leading
- Application architecture
- UI / UX coordination
- Payment processing development
- Core functionalities programming
- Backend programming
- Creating applets templates
- Documenting
- Support

DBBEE, PUBLISH YOUR DATA ONLINE NO CODING SOFTWARE AS A SERVICE

dbBee is frustration-free, cloud-based software for simple and easy publishing, maintaining and sharing data stored in Excel Sheet, Access or MySQL database.

It is a highly intuitive step-by-step no-code wizard-based platform for making simple online applications without programming.

This actually was an inhouse project, based on the idea of our chief UI/UX designer that so many people have enough knowledge to make DIY web site (using WordPress, Joomla!, Wix, Jimdo, etc.) but get stuck when it comes to simple task of publishing dynamic data that require tailor-made approach.

We did some brief market research, decided to give it a go, and built the fully functional system that covered user registration, subscription payments, three levels of subscriptions each with its own rules and limitations, over 10 different application types with wizards, both written and video tutorials, plug-ins for WordPress, Joomla! and Drupal, etc. in less than 4 months.

Currently the system servers thousands of users and brings us a decent monthly revenue.

Seeing what our users, that in most cases have just a basic knowledge in DIY tools, can do using dbBee, amazes us over and over again, and makes us extremely satisfied.
